HYACINTS

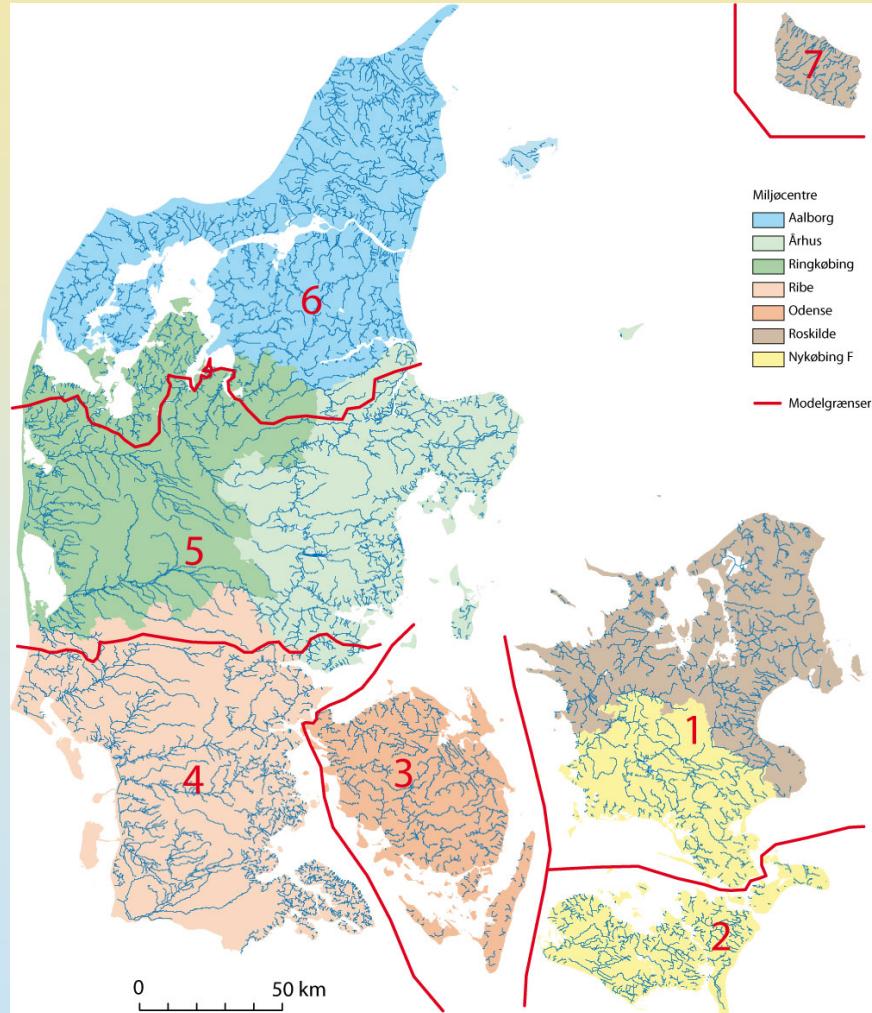

## Sources of Uncertainty

# Downscaling: Timescale

# Downscaling: Spatial Scale

- ◆ All of Denmark
- ◆ DK-submodels (7)

# Downscaling / Bias Correction

## Delta Change Method

- Monthly or seasonal transfer functions
- State variables (temp) - absolute change is applied

$$T_{\Delta}(i, j) = T_{\text{obs}}(i, j) + \Delta_T(j)$$

- Flux variable (precip) - relative change is applied

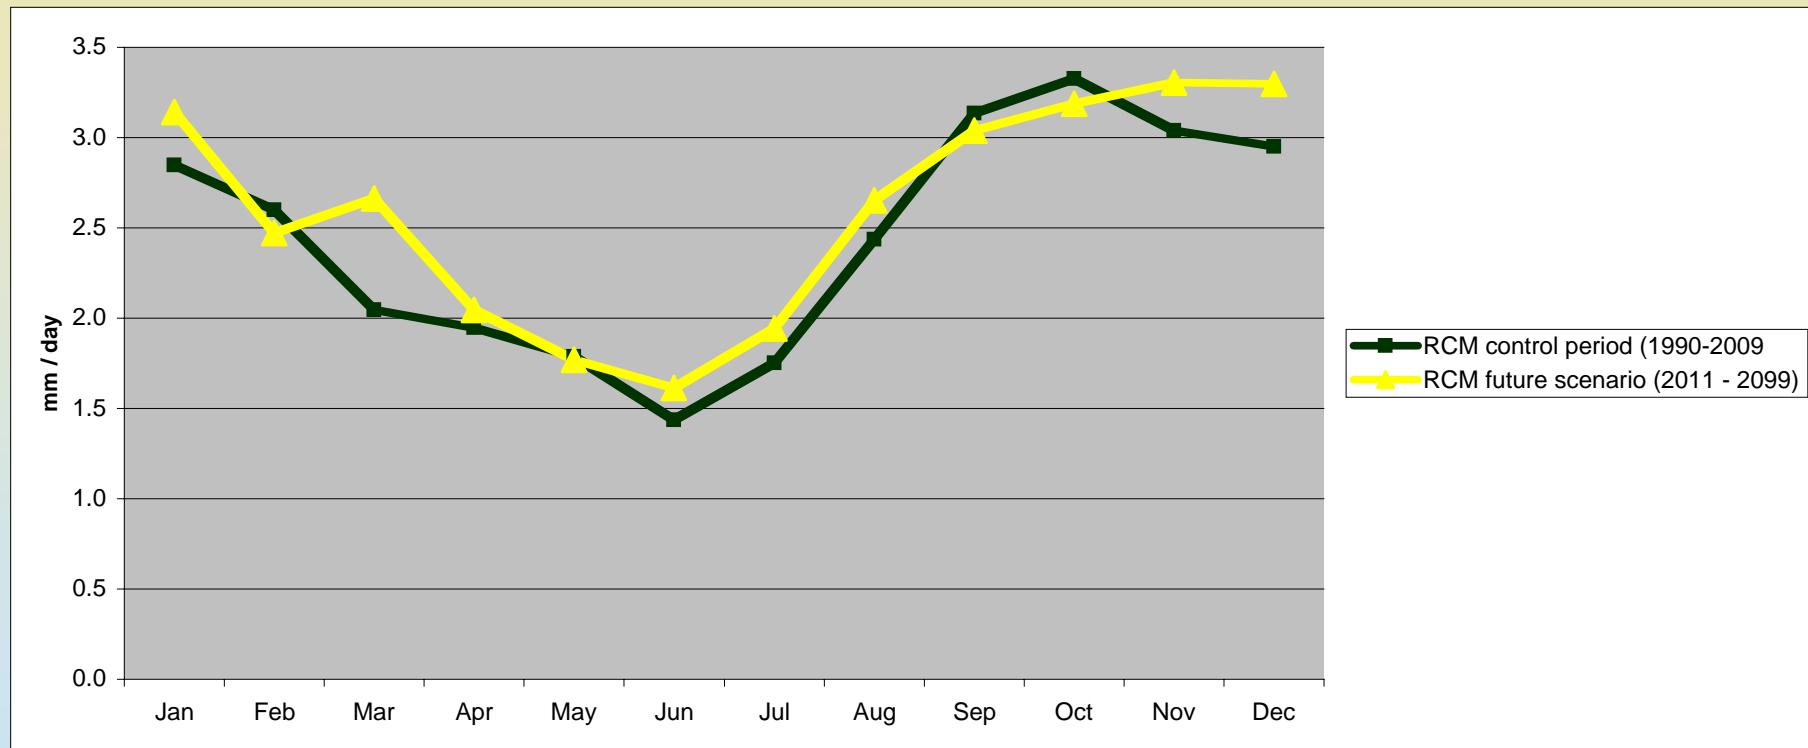

$$P_{\Delta}(i, j) = \Delta_P(j) * P_{\text{obs}}(i, j)$$

## Histogram Equalization Method

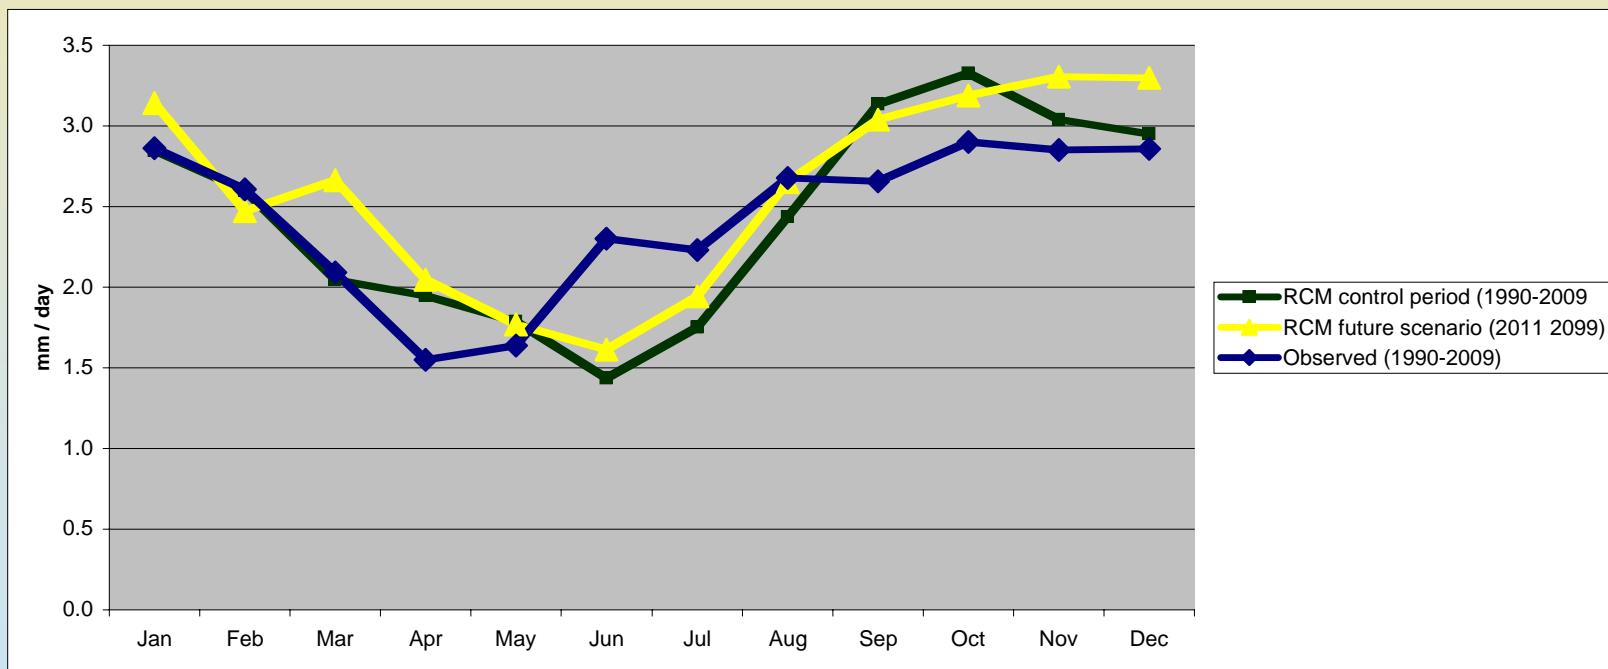

- Normalizes daily climate data (cumulative distribution functions) based on the distribution of rainfall intensity on an annual scale

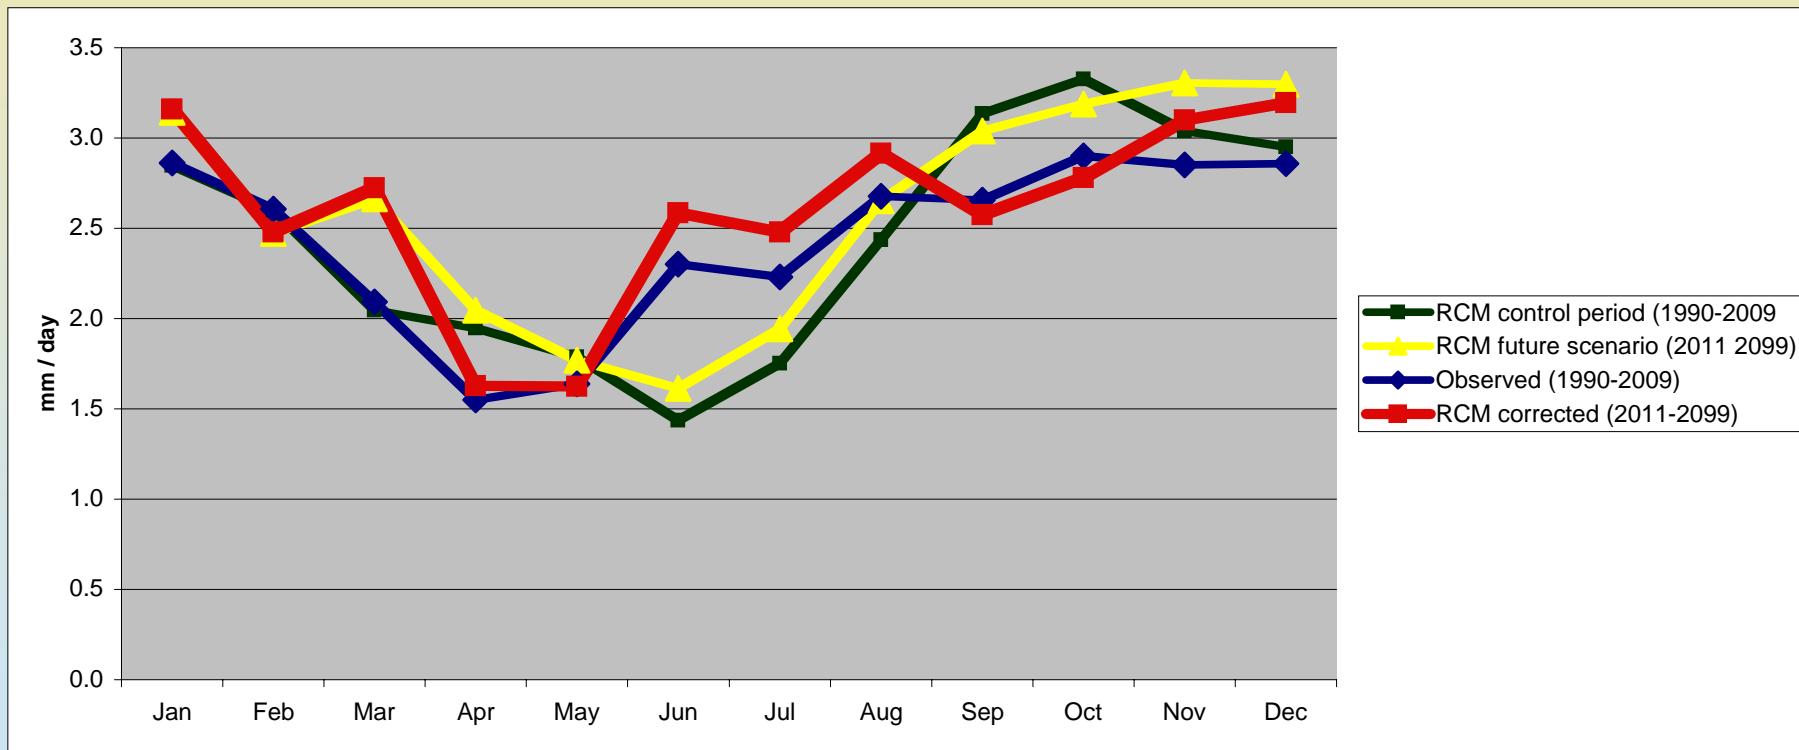

# BCM-DMI Climate Model: hindcast and future scenarios

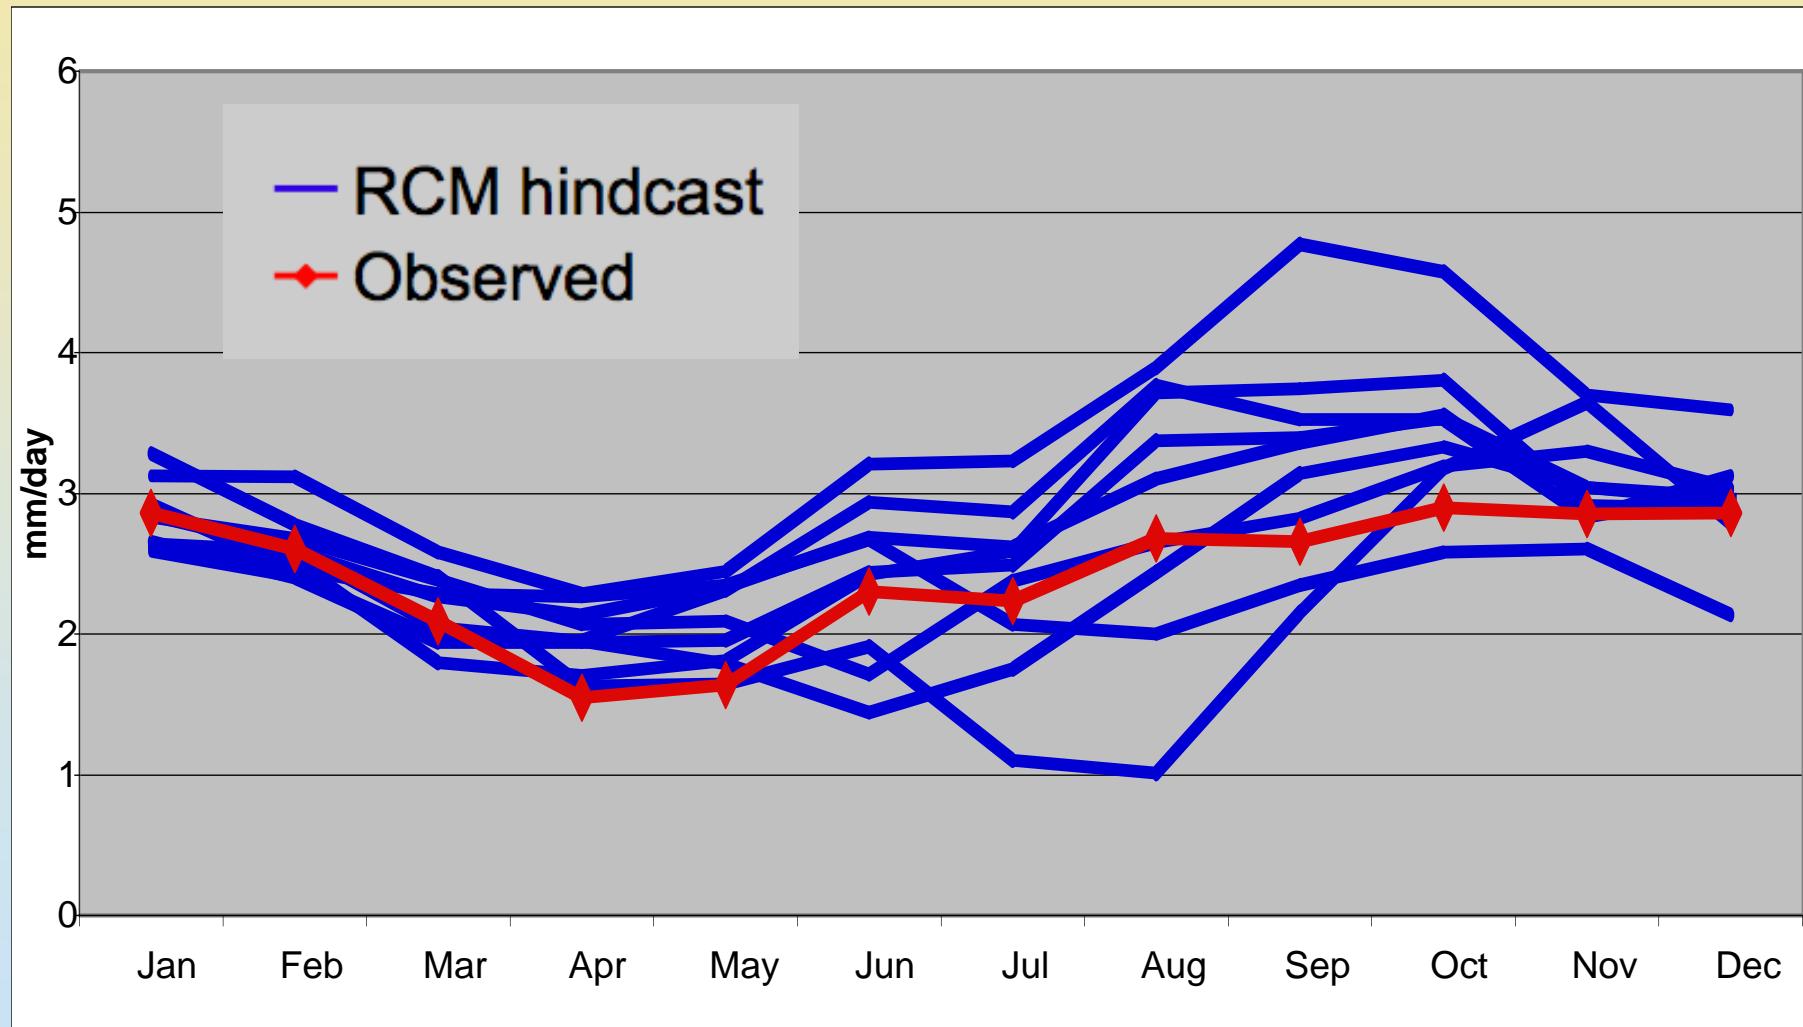

# BCM-DMI Climate Model: hindcast and future scenarios vs. Observed data

## BCM-DMI Climate Model: corrected

# Denmark Mean Daily Precip /Month: Observed vs. RCM Scenarios 1990-2009

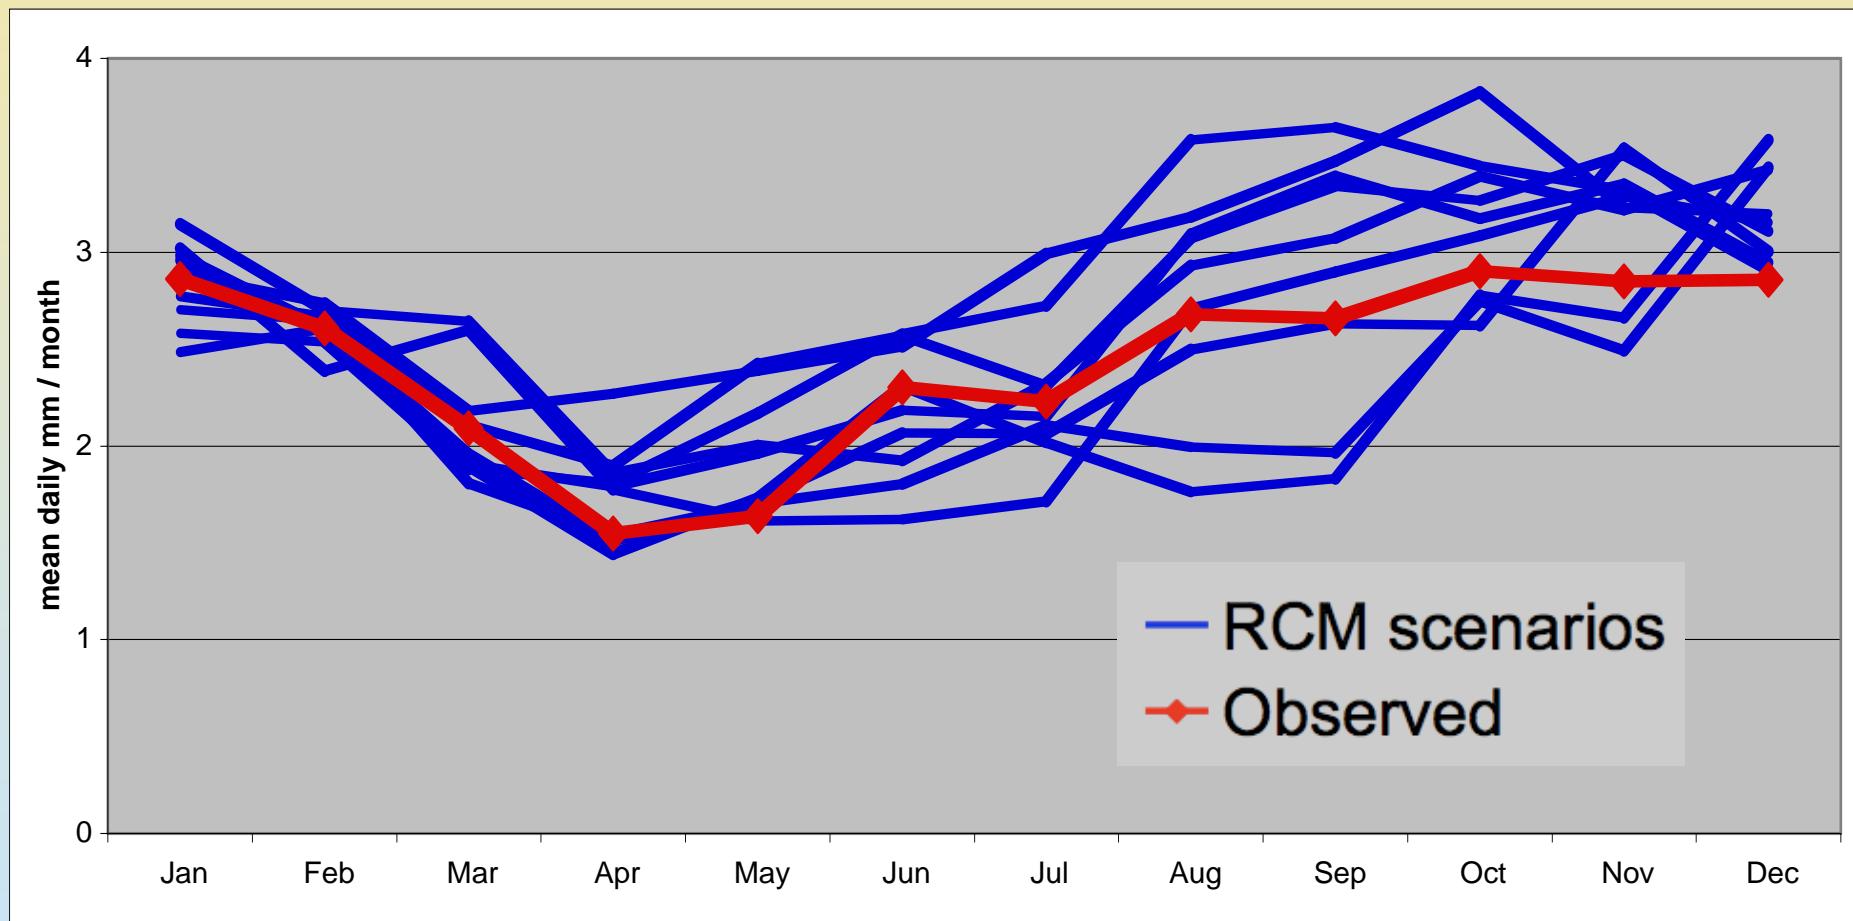

# Denmark Mean Daily Precip /Month: RCM Scenarios %Error 1990-2009

## Corrected Future Scenarios: 2011 – 2099 (all Denmark)

## Denmark Mean Daily Precip / Month Future (near, middle, far)

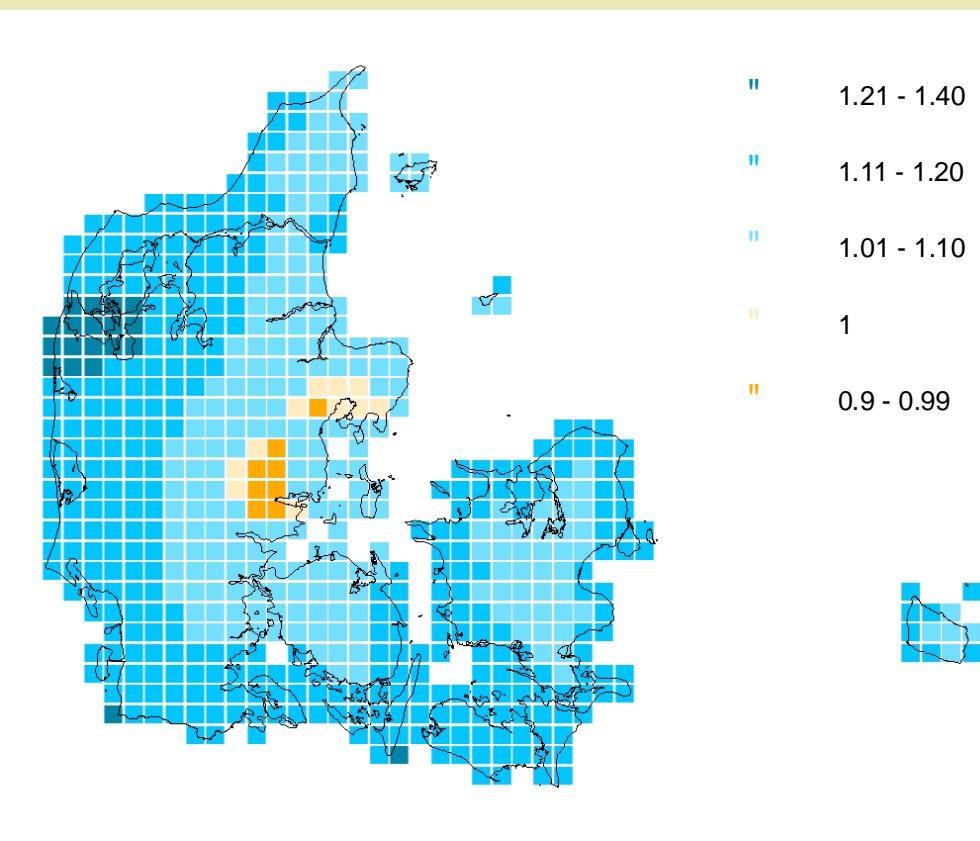

HYACINTS

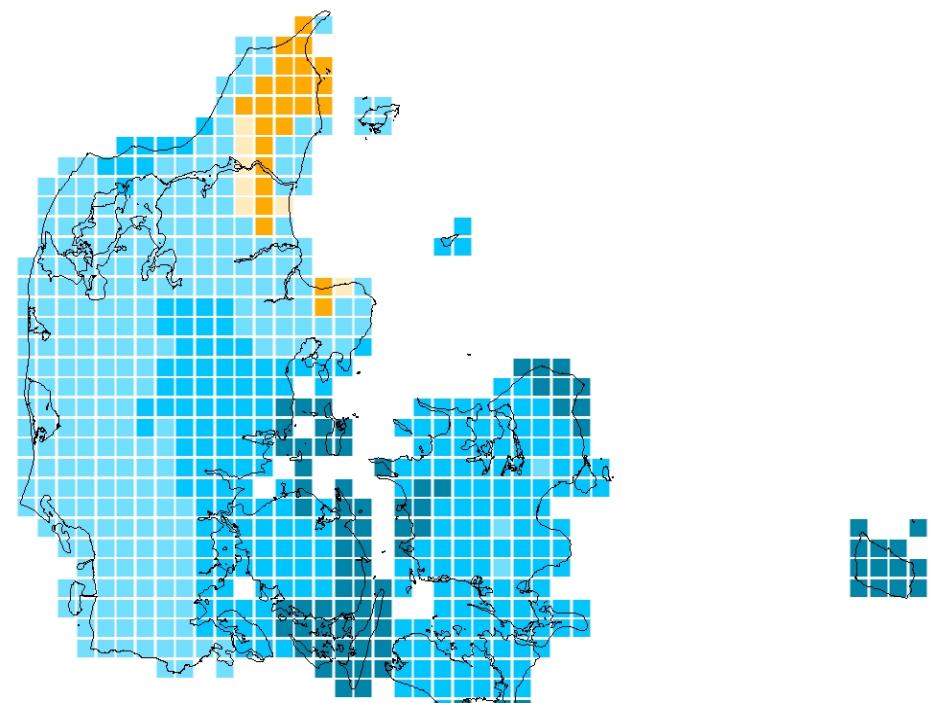

# Spatially Distributed Delta Change Factors (BCM-DMI)

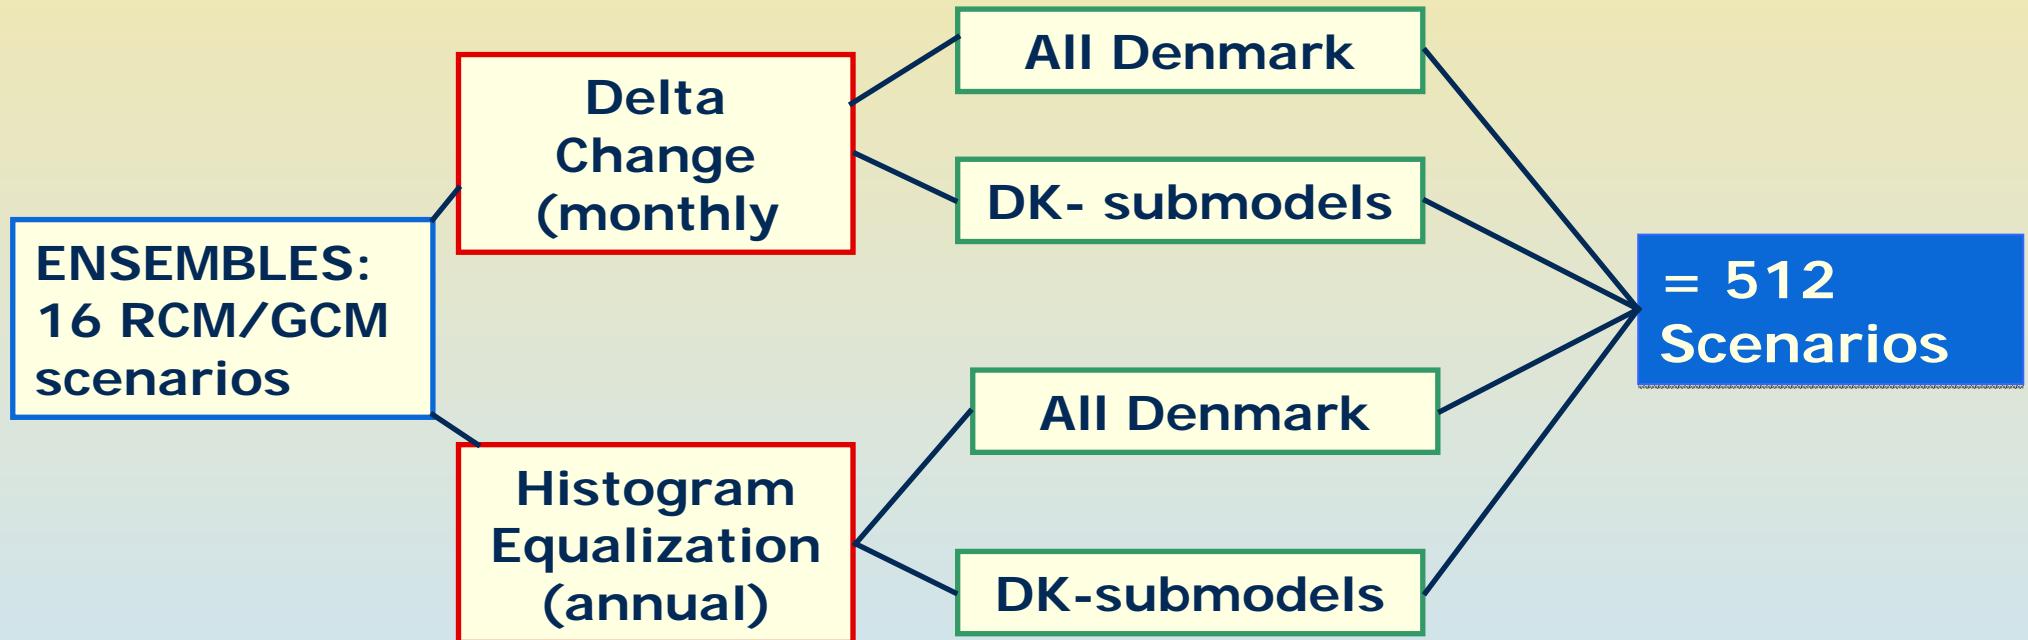

winter

summer

# Outputs / Deliverables

# Forward Uncertainty Analysis

- ◆ 512 scenarios are speculations about future boundary conditions, used as climate inputs to hydrological (DK-model) simulations over Denmark
- ◆ Evaluate uncertainty between entire methodologies by comparing hydrologic outputs from all 512 scenarios
- ◆ Disentangle uncertainty with subsets of comparisons between:
  - Choice of RCM/GCM
  - Downscaling/bias correction methods
  - Spatially distributed (7 catchments) vs. applications to all of Denmark

# Conclusions

- ◆ Based on the ENSEMBLES climate change scenarios for Denmark, there is no clear tendency for future precipitation changes
- ◆ Future climate has uncertainty, hydrological change results are completely conditional on choice of scenario, downscaling method, and spatial / temporal restraints
- ◆ Important to incorporate multiple climate model predictions and uncertainty in climate change impact studies

# Thank you!
